

Summary of Recommendations

Filtering expectations and accuracy

“Available Today” filter does not work as expected. High

Recommendations:

- Review filtering logic to ensure results match availability.
- Default PDP to size/color variation available for same-day pickup
- When the filter is on, only show size/color variations available for same-day pickup on the PDP. Grey out unavailable options and add an “Available on [XX Date]” tag.

“Available Today” filter is not noticeable to some participants. Medium

Recommendations:

- Increase visibility of the filter to make it easier to find and use.
- Consider a distinct in-store pickup shopping flow.

Switching store location while shopping

Adding “Pickup Today” items from multiple stores causes unexpected system behavior. Medium

Recommendations:

- Provide clearer messaging when switching store locations, like:
 - A notification at checkout when items are reassigned to a different store.
 - A warning when switching to Store B with same-day pickup items from Store A.

‘Sold-Out’ message is shown at checkout for items available at nearby stores. Medium

Recommendation: Adjust messaging to clarify that items are still available at other stores (e.g., “We moved your items available at other stores to Saved for Later”).

Pickup logistics

Pickup logistic information is hard to find. Low

Recommendation: Add pickup details (ready time, hold period) to checkout page, shopping bag page, and/or main FAQ page
